Comprehensive guide! Its this type of very good read through. It is actually written in simple words and phrases rather than difficult to understand. It is extremely difficult to leave it before concluding, once you begin to read the book.

Ever since the days of the muscle sense controversy investigator after investigator has interested himself in the subject of movement until a considerable body of motor psychology, in turn acclaimed and condemned, has developed. The present study is not directly concerned with the implications of movement, nor with the relation of movement to mental processes with which an analytic psychology is largely concerned. As an experimental investigation it grew out of a number of interesting and not at once explicable observations of constant errors in exercises on the accuracy of the perception and reproduction of arm movements. The accuracy of movement has frequently been the subject of special study, from different points of view and not infrequently with varying or inconsistent results. As has often been pointed out, this inconsistency is partly due to the extreme complexity of the sensations aroused by the movement of the parts of the body usually employed - chiefly the upper and lower limbs and the eyes. Introspective analysis of the sensation of movement is exceedingly difficult. Coming, as it does, from a great number of sources - the muscles, ligaments, tendons, articular surfaces and skin - and closely associated as it is with the spatial order of other senses, particularly that of vision, it seems to present a highly complex fusion, the components of which do not readily yield themselves to the efforts of introspective discrimination. Further, as will be more fully developed in a later chapter, the process...
